EXAMINER TORRES, MARCOS L				
ART UNIT 2617		PAPER NUMBER		
NOTIFICATION DATE 09/02/2010		DELIVERY MODE ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

us-docketing@qualcomm.com

Office Action Summary

Application No.

09/853,322

Applicant(s)

CASACCIA ET AL.

Examiner

MARCOS L. TORRES

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 June 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 23 is/are allowed.
- 6) ☒ Claim(s) 1-22, 24-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6-21-2010 has been entered.

Response to Arguments

2. Applicant's arguments filed 6-21-2010 have been fully considered but they are not persuasive.

3. Regarding applicant's representative [hereinafter applicant] arguments that Siwko teaches mobile station as not being part of Siwko network; as shown in the prior office action Siwko discloses the probability is determined by a network element but does not specify the element or its location, a network is a series of devices interconnected by communication channels or combination of elements and devices, per definition the mobile device is part of the network and the sections presented by the applicant talks about the network, system and network resources but do not provide a definitive answer about the mentioned network element. Therefore, since the broadest

reasonable interpretation is given to the claims the examiner cannot exclude possible interpretations unless the reference undoubtedly teaches away.

4. As to applicant argument that Redden all the receiving happens at either the satellite or at the mobile station, it is noted that the satellite is not fixed, thereby can be equated to a mobile station.

5. Also, applicant asserts that Bhatia fails to teach "receiving at a mobile station an initial call request block probability ... adjusting at the mobile station said initial call request block probability based on said elapsed time, said adjusted call request block probability identifying when the mobile station block a call request by foregoing origination of the call request, the examiner reminds the applicant that one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Siwko discloses adjusting a initial call request block probability based on said elapsed time as shown in the current rejection; Redden discloses receiving at a mobile station an indication that the call request is going to be block as shown in page 14 and Bhatia discloses using a broadcasted indication according a priority identifying when the mobile station block a call request by foregoing origination of the call request (see col. 2, lines 38-53, col. 4, lines 34-41). Therefore, the combination of the would bring a mobile station receiving indications that a call request may be block due to priority, loading, etc. using the calculation of Siwko.

6. The rest of the arguments they fall for the same reasons as shown above.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2617

10. Claims 1-4, 6, 8-10, 12-16, 18-20 and 24-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over unpatentable over Bhatia 6112101 in view of Siwko (NPL XP-001017264).

As to claim 1, Bhatia discloses a method for blocking a call request when the assigned quality of service is unavailable, receiving at the mobile device an indication that the assigned quality of service is unavailable [100% call block probability] determining at the mobile station the current indication and when receives the indication with higher QoS the mobile station blocks a call request by foregoing origination of the call request (see col. 2, lines 38-53, col. 4, lines 34-41). Bhatia fails to disclose determining an elapsed time from an effective time of said initial probability. In an analogous art, Siwko discloses a communication system using a method for blocking call request comprising: receiving an initial call dropping probability factor in a calculation to determine call admission or blocking, wherein the probability is determined by a network element; determining an elapsed time from an effective time of said initial probability; adjusting said initial call request block probability based on said elapsed time (see sections II-IV). Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to add these teaching for the simple purpose of maintaining the quality of service by managing the network resources. Siwko discloses that the receiving and adjusting occur at network element [note that network element can be any element connected to the network, including the mobile device], but it is silent regarding at which element is doing those task. However, since the

determination and comparison in Bhatia is done at the mobile station. The combination of Siwsko will also be done in the mobile device too.

As to claim 2, Siwko discloses the method wherein said adjusting includes decreasing said initial call request block probability (see section III formulas) which is not disclosed by Bhatia. Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to add these teaching for the simple purpose of maintaining the quality of service by managing the network resources.

As to claims 3 and 20, Bhatia discloses the method further comprising: using said adjusted initial call request block probability to block a call request at a mobile station in said communication system (see col. 2, lines 38-53, col. 4, lines 34-41).

As to claims 4, 10 and 16, Siwko discloses the method of receiving a time stamp associated with said probability; using said time stamp for determining said elapsed time (see sections II-III) which is not disclosed by Bhatia. Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to add these teaching for the simple purpose of maintaining the quality of service by managing the network resources.

As to claim 6, Bhatia discloses the method wherein said adjusted initial call request block probability allows fewer numbers of mobile stations to initiate call requests than a number of mobile stations allowed to initiate call requests at a time of said initial call request block probability (see col. 2, lines 38-53, col. 4, lines 34-41).

Regarding claims 8-9, 12 and 19, they are the corresponding apparatus claim of method claim 1, 3, 6. Therefore, the claims are rejected for the same reason shown above.

Regarding claims 14-15 are the corresponding system claim of method claim 1, 3, 6. Therefore, claim 14-15 are rejected for the same reason shown above.

Regarding claim 24 is the corresponding means plus function claim of method claim 1. Therefore, claim 24 is rejected for the same reason shown above.

Regarding claim 25 is the corresponding storage medium claim of method claim 1. Therefore, claim 25 is rejected for the same reason shown above.

11. Claims 7, 13 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bhatia in view of Siwko as applied to claims 1-2, 4, 8, 10, 14, 16 and 19 above, and further in view of Redden.

As to claims 7, 13 and 18, the prior references do not disclose the following limitation taught by Redden. Redden discloses the method further comprising: receiving a time period value, wherein said adjusting occurs at least once during a time period substantially equal to said time period value (see page 12, lines 48-50). Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to add these teaching for the simple purpose of maintaining the quality of service during the time that the network resources are limited.

12. Claims 5, 11 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bhatia in view of Siwko as applied to claims 1-2, 4, 8, 10, 14, 16 and 19 above, and further in view of Redden and Weishaupt (U.S. Patent 4,493,102).

As to claims 5, 11 and 17, Bhatia discloses everything claimed as explained above except for the method of receiving a call request block termination time; terminating a call request block performed based on said adjusted initial call request block probability in a gradual process from said effective call request block termination time. Redden discloses receiving a call request block termination time; terminating a call request block (see page 11, lines 43-46). Weishaupt disclose using a gradual process (see col. 1, lines 59-66). Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to combine these teachings in order to preserve the quality of service.

13. Claim 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bhatia in view Redden and further in view of Siwko.

As to claim 21, Bhatia discloses in a communication system, an apparatus comprising a receiver configured for receiving at the mobile station for receiving at the mobile device an indication that the assigned quality of service is unavailable [100% call block probability]; and a processor for determining at the mobile station the current indication and when receives the indication with higher QoS the mobile station blocks a call request by foregoing origination of the call request (see col. 2, lines 38-53, col. 4, lines 34-41). Bhatia fails to disclose determining an elapsed time from an effective time

of said initial probability. In an analogous art, Redden discloses a communication system, an apparatus comprising: a receiver configured for receiving at the mobile station call request block (admission/refusal) information as specified by a network element, and a processor configured for determining said call request block information, wherein the block probability is determined by a network element (see page 14, lines 4-22). Therefore, it would have been obvious to one of the ordinary skills in the art at the time of the invention to combine these teachings to let the mobile station know when it is possible to transmit and make a call, without the need of the mobile station transmit when the wireless resources are not present, thereby efficiently managing the finite wireless resources. Redden does not specifically disclose wherein the call request block information is a percentage of calls to be blocked and adjusting said call request block information. In an analogous art, Siwko discloses wherein the call request block information is a percentage of calls to be blocked and determining elapsed time of the call request block probability and adjusting said call request block information (see sections II-IV). Therefore, it would have been obvious to one of the ordinary skill in the art to determine the elapsed time and adjust the parameters accordingly since the parameters and conditions are not constants and change with time.

As to claim 22, Redden discloses the apparatus wherein said processor is further configured to use said adjusted initial call request to block a call, which is not disclosed by Bhatia (see page 14, lines 4-22).

Allowable Subject Matter

14. Claim 23 is allowed.
15. The following is a statement of reasons for the indication of allowable subject matter: A method for blocking a call request at a mobile station, the method comprising: receiving at the mobile station an initial call request block probability, the initial call request block probability being a percentage of calls to be blocked as specified by a network element; receiving at the mobile station a time stamp and a time period associated with the received initial call request block probability; determining an elapsed time from an effective time of said initial call request block probability using the received time stamp; iteratively adjusting the initial call request block probability, the number of iterations being based on the ratio of the elapsed time to the received time period; generating a random number by the mobile station between minimum and maximum allowed values associated with the initial call request block probability; and blocking the call request at the mobile station based on a comparison of the randomly generated number and the adjusted initial call request block probability.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MARCOS L. TORRES whose telephone number is (571)272-7926. The examiner can normally be reached on 9:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on 571-252-7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
